Description
Steps To Recreate

Description

SQL parsing fails when a query includes multiple columns in the PARTITION BY clause and a ROWS-based windowing clause. In addition, the REGEXP_LIKE SQL function has been added to the SQL allowlist.

Steps To Recreate

Create a script that queries the database. The SQL statement should include a PARTITION BY clause that references multiple columns, and it should also use the REGEXP_LIKE database function. Execute the SQL by running the script.

Expected: The SQL executes successfully.
Actual: The SQL fails with a parsing error.

Make sure the script is a CM script and "spl.runtime.customSQLSecurity" property is set to true to trigger the SQL parsing and validation.

Summary

Change Type	Y/N
Does this fix require any Admin (Soft) Table Changes to be made by the client?	N
Does this fix require upgrade data changes to be applied?	N
Does the fix involve DB Changes?	N
Is there an impact on any user interface or any other on-line behavior?	N
Is there an impact on any batch process?	N
Is there an impact on CM – Custom Modification processing?	N

The following questions are only applicable to products built on Oracle Utilities Application Framework version 22A / 4.5.0.0.0 or earlier.

Change Type	Y/N
Does this fix require an application viewer update for Algorithm data (run F1-AVALG)?	N
Does this fix require an application viewer update for MO data (run F1-AVMO)?	N
Does this fix require an application viewer update for Table data (run F1-AVTBL)?	N

FW Changes

Updated the SQL parser to support multiple columns in PARTITION BY and window clause like ROWS. Added REGEXP_LIKE to the SQL function allowlist.

Recommended Test Cases

Create a script which queries the database.
Use a SQL statement that includes a PARTITION BY clause that references multiple columns.
Execute the script to run the SQL.
Verify that the SQL executes successfully.
Update the same SQL statement to include the REGEXP_LIKE database function .
Re-run the script to execute the updated SQL.
Verify that the updated SQL executes successfully.

Make sure the script is a CM script and "spl.runtime.customSQLSecurity" property is set to true to trigger the SQL parsing and validation.
