Description
Steps To Recreate

Description

In a Data Explorer popup, when a search request fails due to insufficient prefilled hidden filters causing an error, the popup remains stuck in the loading state. The loading animation continues to display and blocks the input fields, preventing the user from performing another search.

Steps To Recreate

Add a Maintenance Map with a search field that launches a Data Explorer popup with prefilled hidden filters. If the hidden filters do not provide sufficient search criteria, the request returns an insufficient search criteria error. In this case, the loading animation persists and is not removed, preventing the user from performing further searches as the animation blocks the search fields.

For example in the WAM Application:
1. Navigate to "Add Asset"
2. Select any asset type
3. Click the search icon to select asset location. This will open a data explorer popup.

Verify that after the initial load with hidden filters, the popup's loading animation is removed, allowing the user to perform searches.

Summary
FW Changes

Summary

Change Type	Y/N
Does this fix require any Admin (Soft) Table Changes to be made by the client?	N
Does this fix require upgrade data changes to be applied?	N
Does the fix involve DB Changes?	N
Is there an impact on any user interface or any other on-line behavior?	N
Is there an impact on any batch process?	N
Is there an impact on CM – Custom Modification processing?	N

The following questions are only applicable to products built on Oracle Utilities Application Framework version 22A / 4.5.0.0.0 or earlier.

Change Type	Y/N
Does this fix require an application viewer update for Algorithm data (run F1-AVALG)?	N
Does this fix require an application viewer update for MO data (run F1-AVMO)?	N
Does this fix require an application viewer update for Table data (run F1-AVTBL)?	N

FW Changes

Made changes to DERefreshUtils.js and DECommonUtils.js to fix the issue

Recommended Test Cases

Same as steps to replicate
