Reported Issue

Description

The view is connecting the device config to all locations it's been installed and because of that displays same field activity more once instead of the single instance for the correct premise where the configuration is actually installed.

Unable to use the existing view, will need to recreate the query in the view manually.

The view is needed for the report that is used for electric outage management.

Steps To Recreate

1. Run the following query using the X1_BI_ACTIVITY_VW view:
```
select *
from X1_BI_ACTIVITY_VW
where d1_activity_id = '85573036879904';
```
2. This is expected to return one record for the location that the activity is associated to.
3. But it returns two records for different premises and service points.

Investigation

Problem Cause

The issue was reproduced when the same device was connected to multiple SPs at different times.

Suggested Solution

The fix should be this part of SQL

```
left join (select distinct D1_DEVICE_ID, IE.D1_SP_ID,
                IE.D1_INSTALL_DTTM, IE.D1_REMOVAL_DTTM
        from D1_DVC_CFG     DC
  inner join D1_INSTALL_EVT IE on IE.DEVICE_CONFIG_ID = DC.DEVICE_CONFIG_ID
      ) DS on DS.D1_DEVICE_ID = AD.PK_VALUE1
          and DS.D1_INSTALL_DTTM <= AC.CRE_DTTM
          and (DS.D1_REMOVAL_DTTM is null or DS.D1_REMOVAL_DTTM >= AC.CRE_DTTM)
```

 Copyright ©2026, Oracle. All rights reserved.

Solution Design

Fix the view X1_BI_ACTIVITY_VW to include the updated SQL.

Summary

Change Type	Y/N
Does this fix require any Admin (Soft) Table Changes to be made by the client?	N
Does this fix require upgrade data changes to be applied?	N
Does the fix involve DB Changes?	N
Is there an impact on any user interface or any other on-line behavior?	N
Is there an impact on any batch process?	N
Is there an impact on CM – Custom Modification processing?	N
Does this fix require an application viewer update for Algorithm data (run F1-AVALG)?	N
Does this fix require an application viewer update for MO data (run F1-AVMO)?	N
Does this fix require an application viewer update for Table data (run F1-AVTBL)?	N

Other Changes

Code Clean-Up / Fixes

None.

Data Clean-Up / Fixes

Not applicable.

Recommended Test Cases

Test Case 1: Verify that the view “X1_BI_ACTIVITY_VW” does not return duplicate values.

1. Execute the “Steps to Recreate” 1-3
2. Observe that the returned values are unique.

```
select *
from X1_BI_ACTIVITY_VW
where D1_DEVICE_ID in ('691547717607')

D1_ACTIVITY_ID ACTIVITY_TYPE_CD               BO_STATUS_CD BO_STATUS_REASON_CD
-------------- ------------------------------ ------------ ------------------------------
21420503596962 FIELDACTIVITY                  COMINPROG
```

But the Device was actually connected to multiple SPs.

```
select D1.D1_DEVICE_ID, COUNT(DISTINCT I1.D1_SP_ID),
        substr(LISTAGG(I1.D1_SP_ID, ',')
                 WITHIN GROUP (ORDER BY I1.D1_INSTALL_DTTM), 1, 32) AS SP_LIST
         from D1_DVC_CFG     D1
   inner join D1_INSTALL_EVT I1 on D1.DEVICE_CONFIG_ID = I1.DEVICE_CONFIG_ID
   group by D1.D1_DEVICE_ID
   order by 2 desc
fetch first 2 rows only

D1_DEVICE_ID COUNT(DISTINCTI1.D1_SP_ID) SP_LIST
------------ -------------------------- --------------------------------
691547717607                          2 832481316999,114534451291
000743812451                          1 865933180907
```

Resolution Verification

The above test cases are verified successfully.
