Reported Issue

Description

Ongoing Sync of Usage Subscription, triggered by a custom batch update to a Service Agreement, terminates when a warning occurs (e.g., invalid Device Config Type for Rate Schedule). This results in data misalignment between service agreement and usage subscription, and the reason for sync failure (i.e.the warning) is not reported in the Batch Run page, leaving users unaware of the reason for inconsistency.

Steps To Recreate

- Create a custom batch which updates the service agreement in a new session within the batch.

Custom batch control

Selection Algorithm's script

Processing Algorithm's script

Copyright ©2026, Oracle. All rights reserved.

- Create an account setup and start service.
- The service agreement is created in ‘Pending Start’ state and the corresponding usage subscription is ‘Inactive’.

Service Agreement in ‘Pending Start’

Usage Subscription in ‘Inactive’ state

- To trigger a warning when the batch runs, configure the Device Configuration Type in such a way that it is not valid for the Rate Schedule used by the Service Agreement.

Copyright ©2026, Oracle. All rights reserved.

Device Configuration's type installed on the Service Point

Extendable lookup: Customer Rate Schedule > Device Configuration Type on SP is not configured.

- Run the CM batch job.

Copyright ©2026, Oracle. All rights reserved.

Batch Job Submission

Expected behavior:

- Service Agreement is updated, and Usage subscription is synced with that update.

Actual behavior:

- Service Agreement is updated from ‘Pending Start’ to ‘Active’.

- Usage subscription is still ‘Inactive’.

Copyright ©2026, Oracle. All rights reserved.

- There is no error/warning on the Batch run indicating the reason for not syncing the usage subscription with the service agreement.

Solution Design

On the service agreement's audit algorithm X1-GENMOAUIF, restrict the warnings check to online connections.

Summary

Change Type	Y/N
Does this fix require any Admin (Soft) Table Changes to be made by the client?	N
Does this fix require upgrade data changes to be applied?	N
Does the fix involve DB Changes?	N
Is there an impact on any user interface or any other on-line behavior?	N
Is there an impact on any batch process?	Y
Is there an impact on CM – Custom Modification processing?	N
Does this fix require an application viewer update for Algorithm data (run F1-AVALG)?	N
Does this fix require an application viewer update for MO data (run F1-AVMO)?	N
Does this fix require an application viewer update for Table data (run F1-AVTBL)?	N

Changes

Plug-in spot: Maintenance Object – Audit (F1MA) (Existing)

Algorithm Type: Generic Change Data Capture - Ignore Further Audits (X1-GENMOAUIF) (Existing)

Business Logic

In Step 10,

- *If warnings are accumulated (Existing)*
    - Check if connection is Online or Batch (Business service: F1-CheckOnlineConnection).
    - If online connection
        - *Terminate (Existing)*

Implementation Guidelines

Please note, if the warning is triggered from a separate session from within the batch ex., by using F1-ExecuteScriptInNewSession, it will not be logged in the batch run tree, since the driving session is not aware of the warning.

Data Clean-Up / Fixes

N/A

Recommended Test Cases

Test Case 1: Reported Issue.

- Refer Steps To Recreate

Expected Result:

- Service Agreement is updated from ‘Pending Start’ to ‘Active’.
- Usage Subscription is synced with Service agreement and is updated to ‘Active’ status.
- No warnings show up on the batch run.

Test Case 2: Service Agreement updated through batch in the same session.

- Refer Steps To Recreate
- Before executing the batch, modify the CM batch processing algorithm to update the service agreement directly in the batch session and not in a new session. ie., do not use business service: F1-ExecuteScriptInNewSession to update SA inside the batch.

Expected Result:

- Service Agreement is updated from ‘Pending Start’ to ‘Active’.
- Usage Subscription is synced with Service agreement and is updated to ‘Active’ status.
- Accumulated warnings are shown on the batch run.

Test Case 3: Service Agreement updated online.

- Create an account setup and start service.
- The service agreement is created in ‘Pending Start’ state and the corresponding usage subscription is ‘Inactive’.
- To trigger a warning when the batch runs, configure the Device Configuration Type in such a way that it is not valid for the Rate Schedule used by the Service Agreement.
- Click on ‘Activate SA’ button on the service agreement page.

Expected Result: The warning ‘The rate is not valid for device configurations on the SPs of the SA’ is shown on the UI. On clicking ‘OK’, the SA is updated to ‘Active’ and Usage Subscription is updated to ‘Active’. On clicking ‘Cancel’, the update is reverted.
