Reported Issue

Description

After upgrading CC&B from 2.7 to 25.4, billing behavior changed for Customer Class Bill Eligibility algorithms. In 2.7, these eligibility algorithms executed only once per account during billing, and if any eligibility algorithm encountered an error and created a To Do, the bill segment creation was rolled back, and eligibility processing stopped.

In the current version, the same eligibility algorithms are executed multiple times for the same account - typically once per billable Service Agreement (SA) within the account - because the billing process loops through SAs and repeatedly calls the billing routine that evaluates eligibility. Additionally, error handling differs when an eligibility algorithm creates a To Do, billing is not rolled back and subsequent eligibility algorithms continue to run, allowing billing to proceed.

Steps To Recreate

- Setup an account with multiple service agreements.

Account with Customer Class – 'Residential'

Account has 3 active SAs.

- Configure a Bill eligibility algorithm on the customer class of the account. Ensure the algorithm returns Bill Eligibility as 'Eligible' for the account when billing.

Copyright ©2026, Oracle. All rights reserved.

Bill Eligibility algorithm: ZZBILLELIG

Plug-in Script: ZZBILLELIG > Logs a message to indicate the algorithm is executed. Sets Bill's eligibility to Eligible.

Customer Class – Bill Eligibility > ZZBILLELIG

- Generate bill through batch for the account with 3 service agreements.

Batch Bill generated using C1-BLACC.

Bill Generated.

Copyright ©2026, Oracle. All rights reserved.

Batch Logs indicate that the Customer Class – Bill Eligibility algorithm was executed 3 times once for each SA.

Expected Result: The Bill Eligibility algorithms must be executed only once for the account irrespective of the number of service agreements it has.

Actual Result: On the batch logs, it can be observed that the eligibility algorithm was executed 3 times, once for each service agreement.

Solution Design

In the Bill Generation routine (CIPBBILG), limit execution of the Customer Class – Bill Eligibility algorithms to only the initial group of service agreements (or the first service agreement) processed, so that bill eligibility is evaluated upfront at the start of billing.

Summary

Change Type	Y/N
Does this fix require any Admin (Soft) Table Changes to be made by the client?	N
Does this fix require upgrade data changes to be applied?	N
Does the fix involve DB Changes?	N
Is there an impact on any user interface or any other on-line behavior?	N
Is there an impact on any batch process?	**Y**
Is there an impact on CM – Custom Modification processing?	Y
Does this fix require an application viewer update for Algorithm data (run F1-AVALG)?	N
Does this fix require an application viewer update for MO data (run F1-AVMO)?	N
Does this fix require an application viewer update for Table data (run F1-AVTBL)?	N

Translated Java Routines

ProgramCIPBBILG - Generates bill segments for a bill (Existing)

Business Rules

In the Check Eligibility method (***perform_GA000_CHECK_ELIGIBILITY***),

- *If batch billing using schedule, (Existing)*
  - **If Service Agreement Id is null and Processing Sequence is 0**
    - *Execute Customer Class – Bill Eligibility algorithms (Existing)*
  - *……. (Existing)*

Data Clean-Up / Fixes

- N/A

Recommended Test Cases

Test Case 1: Reported Issue.

- Refer to Steps to Recreate.
- **Expected Results**: The Bill Eligibility algorithms must be executed only once for the account irrespective of the number of service agreements it has.

Test Case 2: Batch Billing - Account is not eligible for billing.

- Setup an account with multiple service agreements.
- Configure a Bill eligibility algorithm on the customer class of the account.
- Ensure this algorithm sets bill eligibility to ‘N’ (*Not Eligible*)
- Generate bill through batch for the account with 3 service agreements.

Copyright ©2026, Oracle. All rights reserved.

Expected Result: The Bill Eligibility algorithm on the customer class of the account must be executed only once and set the bill eligibility to 'Not Eligible'. The bill is **not** generated.

Note: This scenario behaves the same way as before.

Test Case 3: Regression scenarios

Account with multiple service agreements - Account and SA type level Bill Eligibility configured.

- Setup an account with multiple service agreements.
- Configure a Bill eligibility algorithm on the customer class of the account.

Batch Billing

SA eligibility fails for one SA.

- Configure bill eligibility algorithm on one of the SA types.
- Ensure this SA Type- Bill Eligibility algorithm returns 'Not Eligible'
- Generate bill through batch for the account with 3 service agreements.
- **Expected Result**:
    - The Bill Eligibility algorithm on the customer class of the account must be executed only once and set the bill eligibility to 'Eligible'.
    - Bill is generated successfully but with only 2 Bill Segments because the SA which was not eligible for billing is skipped.

SA eligibility passes.

- Configure bill eligibility algorithm on one of the SA types.
- Ensure this SA Type- Bill Eligibility algorithm returns 'Eligible'
- Generate bill through batch for the account with 3 service agreements.
- **Expected Result**:
    - The Bill Eligibility algorithm on the customer class of the account must be executed only once and set the bill eligibility to 'Eligible'.
    - Bill is generated successfully for all 3 SAs

Copyright ©2026, Oracle. All rights reserved.

Online Billing

- Generate an online bill.

Expected Result: The bill is generated successfully with bill segments for all 3 SAs.

Account with single service agreement.

Account and SA type level Bill Eligibility configured.

- Setup an account with single service agreements.
- Configure a Bill eligibility algorithm on the customer class of the account.
- Configure bill eligibility algorithm on the SA type.

Batch Billing

- Generate bill through batch for the account.
- **Expected Result**:
    - The Bill Eligibility algorithm on the customer class of the account must be executed once and set the bill eligibility to ‘Eligible’.
    - The Bill Eligibility algorithm on the SA type is also executed once.
    - Bill is generated successfully.

Online Billing

- Generate an online bill.

Expected Result: The bill is generated successfully.

Account level Bill Eligibility configured.

- Setup an account with single service agreement.
- Configure a Bill eligibility algorithm on the customer class of the account.
- Ensure this algorithm sets bill eligibility to ‘E’ (*Eligible*)

Batch Billing

- Generate bill through batch for the account.

Expected Result: The Bill Eligibility algorithm on the customer class of the account must be executed once and the bill is generated successfully.

Online Billing

- Generate an online bill.
