Description
Steps To Recreate

Description

Starting with 25.10, stricter validation was introduced for file names and extensions uploaded through the system (including batch driven uploads and attachments).

As part of this enhancement, the framework validates file extensions against a managed content allowlist (F1-FileExtensionAllowList).

After upgrading to 25.10, customers reported that certain file extensions that were previously accepted are now rejected during batch processing.

This fix is to introduce support for implementations to add to the system's allowlist for file extensions.

Steps To Recreate

1. Upload a file attachment from the "Add Attachment" page.

2. Ensure the extension being used is not present in managed content F1-FileExtensionAllowList.

3. Observe that the upload process rejects the file due to extension validation failure.

Summary
FW Changes

Summary

Change Type	Y/N
Does this fix require any Admin (Soft) Table Changes to be made by the client?	N
Does this fix require upgrade data changes to be applied?	N
Does the fix involve DB Changes?	N
Is there an impact on any user interface or any other on-line behavior?	N
Is there an impact on any batch process?	N
Is there an impact on CM – Custom Modification processing?	Y

The following questions are only applicable to products built on Oracle Utilities Application Framework version 22A / 4.5.0.0.0 or earlier.

Change Type	Y/N
Does this fix require an application viewer update for Algorithm data (run F1-AVALG)?	N
Does this fix require an application viewer update for MO data (run F1-AVMO)?	N
Does this fix require an application viewer update for Table data (run F1-AVTBL)?	N

FW Changes

The framework logic responsible for loading allowed file extensions now also includes extensions defined in the managed content:
CM-FileExtensionAllowList (customer managed)

Recommended Test Cases

Define your additional valid extensions:
1. Go to Managed Content and search for F1-FileExtensionAllowList
2. Duplicate this record using the name to CM-FileExtensionAllowList. Change the description and detailed description as desired.
3. Remove the base delivered extensions. Add your valid extensions using the <extension></extension> tags.

 Copyright ©2026, Oracle. All rights reserved.

Note that you must use the above name for the custom managed content record.

Now confirm that if you follow the steps to recreate, you no longer get an error for the custom extension.
