Reported Issue

Description

When the consumption period crosses over to the next year, the algorithm: C1SEASDAY (Seasonal Days in a Billing Period) returns a non-zero value even though the consumption period falls completely outside the configured seasonal period.

Steps to Replicate

Data Setup

- Configure the algorithm for the algorithm type: C1SEASDAY with the below seasonal dates.

- Add a pre-processing calculation rule to the rate to calculate number of bill days using the Calculate Service Quantity Calculation Rule business object. Scalar Variable uses the algorithm C1SEASDAY.

Copyright ©2026, Oracle. All rights reserved.

Calculation Rule: Calculate Service Quantity

Replication Steps

- Create an account, premise, and start service.
- The rate on the service agreement must have the above calculation rule configured.
- Perform rate check for the above setup from December to January so that the consumption period crosses over to the next calendar year.

Copyright ©2026, Oracle. All rights reserved.

Rate Check > SQ Details

Expected Result: The SQI for the seasonal bill days should return 0 as the consumption period is outside the season defined on the algorithm: C1SEASDAY.

Actual Result: The SQI for the seasonal bill days returns 35(non-zero) even though the bill period is completely outside the high season period defined on the algorithm: C1SEASDAY.

Solution Design

On the algorithm's plug-in script(C1SEASDAY), include the condition to check if the season end date's month is lesser than the season start date's month along with the existing year condition, when setting the base year for the season's end date.

Summary

Change Type	Y/N
Does this fix require any Admin (Soft) Table Changes to be made by the client?	N
Does this fix require upgrade data changes to be applied?	N
Does the fix involve DB Changes?	N
Is there an impact on any user interface or any other on-line behavior?	Y

Copyright ©2026, Oracle. All rights reserved.

Is there an impact on any batch process?	N
Is there an impact on CM – Custom Modification processing?	N
Does this fix require an application viewer update for Algorithm data (run F1-AVALG)?	N
Does this fix require an application viewer update for MO data (run F1-AVMO)?	N
Does this fix require an application viewer update for Table data (run F1-AVTBL)?	N

Plug-in Spot: Calculation Rule - Derive Value (C1DV) (Existing)

Algorithm Type: Seasonal Days in a Billing Period (C1SEASDAY) (Existing)

Main Processing

On the method: adjustDateStringForLeapYear(), make the below highlighted change in the existing logic.

- If start date
  - Set base date = consumption period start date
  - Set season base date = season start date
- Else
  - If consumption period end date's year is greater than consumption period start date's year and season end date's month is lesser than season start date's month
    - Set base date = consumption period end date
  - Else
    - Set base date = consumption period start date
  - Set season base date = season end date

Data Clean-Up / Fixes

- N/A

Recommended Test Cases

Test Case 1: Season is April to September (Summer).

Case 1: Bill Period is outside season.

Reported Issue

- The season is defined from April to September and the bill period is from 12/1/2025 to 1/5/2026 so that it crosses over to the next year.
- Refer to Steps to Replicate

Expected Result: The SQI for the seasonal bill days should return 0 as the bill period is outside the season defined on the algorithm: C1SEASDAY.

Bill Period within the same year

- The season is defined from April to September and the bill period is from 11/1/2025 to 12/1/2025 or 2/1/2025 to 3/1/2025 so that it is in the same year.
- Refer to Steps to Replicate

Expected Result: The SQI for the seasonal bill days should return 0 as the bill period is outside the season defined on the algorithm: C1SEASDAY.

Case 2: Bill Period overlaps the season.

Bill Period crosses over to next calendar year

- The season is defined from April to September and the bill period is from 09/15/2025 to 1/15/2026 so that it crosses over to the next year.
- Refer to Steps to Replicate

Expected Result: The SQI for the seasonal bill days should return 46 which is the number of days the current bill period falls in a defined season.

Bill Period within the same year

- The season is defined from April to September and the bill period is from 10/01/2025 to 11/1/2025 or 5/1/2025 to 6/5/2025 so that it’s in the same year.
- Refer to Steps to Replicate

Copyright ©2026, Oracle. All rights reserved.

Expected Result: The SQI for the seasonal bill days should return the number of days the current bill period falls in a defined season.

10/01/2025 to 11/1/2025 – 30

5/1/2025 to 6/5/2025 - 5

Test Case 2: Season is December to January (Winter).

Case 1: Bill Period is outside season.

Bill Period within the same year

- The season is defined from December to January and the bill period is from 11/1/2025 to 11/30/2025 or 2/1/2025 to 3/1/2025 so that it is in the same year.
- Refer to Steps to Replicate

Expected Result: The SQI for the seasonal bill days should return 0 as the bill period is outside the season defined on the algorithm: C1SEASDAY.

Case 2: Bill Period overlaps the season.

Bill Period crosses over to next calendar year

- The season is defined from December to January and the bill period is from 12/15/2025 to 1/15/2026 so that it crosses over to the next year.
- Refer to Steps to Replicate

Expected Result: The SQI for the seasonal bill days should return the number of days the current bill period falls in a defined season.

12/15/2025 to 1/15/2026 – 31

Bill Period within the same year

- The season is defined from December to January and the bill period is from 11/15/2025 to 12/15/2025 or 1/1/2025 to 2/5/2025 so that it’s in the same year.
- Refer to Steps to Replicate

Expected Result: The SQI for the seasonal bill days should return the number of days the current bill period falls in a defined season.

11/15/2025 to 12/15/2025 – 15
