You may not provide this document or any copy of this document to third parties outside your company unless you first obtain the written permission of Oracle.

This document introduces new and changed business and technical features that Oracle has included in the ”Single Fix” described in this document.

The functionality of the Single Fix described in this document may be superseded by functionality included in a future Single Fix, Release or Update. Oracle reserves the right to revise or expand the functionality of any future Single Fix, Release or Update of Oracle Utilities Meter Data Management in a manner compatible with Oracle’s business objectives, and the business objectives of each of Oracle’s customers, at the time that Oracle makes the software code generally commercially available.

Oracle will provide you with additional information concerning product Releases or Updates after Oracle finalizes the related specifications and tests the product component(s). Final documentation will be shipped to you with the media containing the Release or Update.

Please contact Oracle Customer Service Group if you have any questions or comments concerning this document, which has been prepared for your benefit as a licensee of Oracle Utilities Meter Data Management.

Reported Issue

Description

Baseline Calculation is expecting Temperature Interval size and Meter Read Interval size to be same. In general, weather data is provided in hourly intervals and meter data can be of different interval sizes.

Steps To Recreate

N/A

Solution Design

- Baseline calculation has been enhanced to support a different interval size for temperature –
  - A new field ‘Temperature Interval Size’ has been added.
  - If Interval size > Temperature interval size, then error is thrown during the baseline calculation.
  - If Interval size < Temperature interval size,
    - Align the temperature windows to the meter reads - aligned measurement window.
    - These dates are then used to retrieve the temperature measurements.
- The logic used to determine whether an event occurred on a given day has been updated to also consider the event participation. As a result, in the logic, an event is now considered to have occurred on a day only when the program event includes event participation. Such days are skipped.
- Changes have been made to align the time component with the interval size for adjusted baseline measurements and raw baseline measurements.

Summary

Change Type	Y/N
Does this fix require any Admin (Soft) Table Changes to be made by the client?	N
Does this fix require upgrade data changes to be applied?	N

Copyright ©2026, Oracle. All rights reserved.

Does the fix involve DB Changes?	N
Is there an impact on any user interface or any other on-line behavior?	Y
Is there an impact on any batch process?	N
Is there an impact on CM – Custom Modification processing?	N
Does this fix require an application viewer update for Algorithm data (run F1-AVALG)?	N
Does this fix require an application viewer update for MO data (run F1-AVMO)?	N
Does this fix require an application viewer update for Table data (run F1-AVTBL)?	N

Changes

Java files modified –

- MessageRepository.java
- AdminMessages.java

Configuration changes –

- Field: TEMP_INTERVAL_SIZE_LBL (New)
- Data area: D2-BaselineCalcData (Updated – added temperatureIntervalSize)
- Message Category: 11802, Message Number: 10095, Message Text: Temperature Interval Size must be provided if the X Selection Parameter is Temperature
- Message Category: 11802, Message Number: 10094, Message Text: Interval Size of UOM/TOU/SQI (%1) measurement can't be greater than the Temperature Interval Size of Temperature's UOM/TOU/SQI (%2)
- Script: D2-VALBCINP
- Script: D2_BaselineC

Recommended Test Cases

Test Case 1: Verify that the validation for the newly added temperature interval size field is working as expected.

1. Create a program settlement calculation group and add the Rule - Baseline Calculation.
2. Verify that the following validation is done correctly:
    a. Temperature Interval Size must be provided if the X Selection Parameter is Temperature.

Copyright ©2026, Oracle. All rights reserved.

Pre-Setup

- Enroll into a Program.
- Navigate to the Metered Service Point associated to the enrolled Program's Program Subscription.
- Install Device with Interval Measuring Components with different UOMs.
- Setup data on the Measuring Components for 2 months of data. (15 minutes SPI data for test case 2, one hour SPI data for Test case 3).
- A work calendar is setup listing the holidays for the year.
- Program events occur for few days in the 2 months period.
- For Temperature –
    - Create weather station that in turn creates weather meter.
    - On the weather meter, add device configuration and measuring component.
    - Setup data on the Measuring Component for 2 months of data.

Test Case 2: Verify that Baseline Calculation Rule works correctly for temperature when interval size and temperature interval size differ.

Default Baseline Calculation Configuration-

Lookback	45
X of Y Type	High
X Selection Parameter	Temperature
Value of X	5
Value of Y	10
Interval Size	15 mins
Adjustment Type	Additive
Adjustment Window Start	-4
Adjustment Window End	-1
Adjustment Cap % (+/-)	20
Day Type	Weekdays
Temperature Interval Size	60 mins

- Configure UOM, UOM generated, UOM Temperature on the baseline calculation rule.

 Copyright ©2026, Oracle. All rights reserved.

Case 1: When interval size is less than the temperature interval size and baseline start, and end date/time align with the interval size.

- Configure interval size and temperature interval size on the rule. (Example interval size: 15 mins and temperature interval size: 60 mins).
- Create a program event settlement transaction such that the start and end date/times are aligned with the interval size. (Example: start date/time – 08-09-2024 8:15 PM, end date/time – 08-09-2024 10:30 PM.)
- Verify that correct time intervals are considered for the qualified baseline days, qualified temperature days, selected baseline days and selected temperature days.
    - Example:
        - start date/time – 08-09-2024 8:15 PM, end date/time – 08-09-2024 10:30 PM.)
        - For the qualified and selected days, meter reads at these time intervals are considered – 8:30PM, 8:45PM……10:30PM.
        - For the qualified and selected days, temperature time intervals considered – 8PM, 9PM, 10 PM
- Verify that the baseline calculation is done correctly.

Case 2: When interval size is less than the temperature interval size and baseline start, and end date/time do not align with the interval size.

- Configure interval size and temperature interval size on the rule. (Example interval size: 15 mins and temperature interval size: 60 mins).
- Create a program event settlement transaction such that the start and end date/times are not aligned with the interval size. (Example: start date/time – 08-09-2024 8:58 PM, end date/time – 08-09-2024 10:58 PM.)
- Verify that correct time intervals are considered for the qualified baseline days, qualified temperature days, selected baseline days and selected temperature days.
    - Example:
        - start date/time – 08-09-2024 8:58 PM, end date/time – 08-09-2024 10:58 PM.)
        - For the qualified and selected days, meter reads at these time intervals are considered – 9 PM, 9:15PM……10:30PM, 10:45PM.
        - For the qualified and selected days, temperature time intervals considered – 9PM, 10 PM
- Verify that correct time (aligned based on the interval size) is displayed for the raw baseline and adjusted baseline measurements.
- Verify that the baseline calculation is done correctly.

Case 3: When interval size is greater than temperature interval size.

- Configure interval size and temperature interval size on the rule. (Example interval size: one hour and temperature interval size: 15 mins).
- Create a program event settlement transaction.

Copyright ©2026, Oracle. All rights reserved.

- Verify that error – ‘Interval Size of UOM/TOU/SQI (<uom>/<tou>/<sqi>) measurement can't be greater than the Temperature Interval Size of Temperature's UOM/TOU/SQI (<uom temperature>/<tou temperature>/<sqi temperature>)’ is thrown since interval size is greater than temperature interval size.

Test Case 3: Verify that Baseline Calculation Rule works correctly for temperature when interval size and temperature interval size are same.

Default Baseline Calculation Configuration-

Lookback	45
X of Y Type	High
X Selection Parameter	Temperature
Value of X	5
Value of Y	10
Interval Size	60 mins
Adjustment Type	Additive
Adjustment Window Start	-4
Adjustment Window End	-1
Adjustment Cap % (+/-)	20
Day Type	Weekdays
Temperature Interval Size	60 mins

- Configure UOM, UOM generated, UOM Temperature on the baseline calculation rule.

Case 1: When baseline start, and end date/time align with the interval size.

- Configure interval size and temperature interval size on the rule. (Example interval size: 60 mins and temperature interval size: 60 mins).
- Create a program event settlement transaction such that the start and end date/times are aligned with the interval size. (Example: start date/time – 08-09-2024 04:00 PM, end date/time – 08-09-2024 07:00 PM.)
- Verify that correct time intervals are considered for the qualified baseline days, qualified temperature days, selected baseline days and selected temperature days.
    - Example:
        - start date/time – 08-09-2024 04:00 PM, end date/time – 08-09-2024 07:00 PM.)
        - For the qualified and selected days, meter reads at these time intervals are considered – 05:00PM, 06:00PM, 07:00PM.

 Copyright ©2026, Oracle. All rights reserved.

        - For the qualified and selected days, temperature time intervals considered – 05:00PM, 06:00PM, 07:00PM.
- Verify that the baseline calculation is done correctly.

Case 2: When baseline start, and end date/time do not align with the interval size.

- Configure interval size and temperature interval size on the rule. (Example interval size: 60 mins and temperature interval size: 60 mins).
- Create a program event settlement transaction such that the start and end date/times are not aligned with the interval size. (Example: start date/time – 08-09-2024 04:20 PM, end date/time – 08-09-2024 08:10 PM.)
- Verify that correct time intervals are considered for the qualified baseline days, qualified temperature days, selected baseline days and selected temperature days.
    - Example:
        - start date/time – 08-09-2024 04:20 PM, end date/time – 08-09-2024 08:10 PM.)
        - For the qualified and selected days, meter reads at these time intervals are considered - 05:00PM, 06:00PM, 07:00PM, 08:00PM.
        - For the qualified and selected days, temperature time intervals considered – 05:00PM, 06:00PM, 07:00PM, 08:00PM
- Verify that correct time (aligned based on the interval size) is displayed for the raw baseline and adjusted baseline measurements.
- Verify that the baseline calculation is done correctly.

Test Case 4: Verify that only program events with event participation records are considered and skipped during baseline calculation.

1. Create event participation for few program events.
2. During the retrieval of qualifying baseline days, the days on which an event has occurred are skipped. An event is now considered to have occurred when there is event participation for the program events.
3. Create a program settlement calculation group and add the Rule - Baseline Calculation, Math Rule, End of Event Program Settlement Rule.
4. Create program event settlement transaction.
5. Verify that the qualifying baseline measurement days and skipped days are correct. The days on which there is a program event with event participation are skipped.
