Description

Several enhancements are implemented in the To Do Management portal as well as the Details tab of the To Do Dashboard portal.
- Open up the restriction that currently requires either To Do Type or Assignee. Users may now enter a To Do Role without other criteria. Note that it is recommended to use the To Do Role filter by itself for use cases where a reasonable number of records are associated.

- As part of this, the dependency between the To Do Role and the To Do Type are adjusted. When selecting a To Do Role, the list of To Do Types are those valid for the Role. Similarly when selecting a To Do Type, the list of To Do Roles are those valid for the Type.

- The Characteristic Type filters are now available when selecting To Do Role only. In this case, the system shows all the Characteristic Types that are valid for the To Do Entity. If you select a To Do Type and the To Do Type has valid To Do characteristic types defined, the existing logic applies where the system shows only the Char Types for the To Do Type. For manual To Do Types, the list is always built based on the values defined on the To Do Type.

- In addition, the values for characteristic filters are now retained when a to do type is changed as long as the characteristic type is valid for the new to do type.

- There is a new opt-in feature related to displaying the Characteristics column in the results. Currently this column shows name / value pairs of characteristics linked to the To Do Entry. If a To Do Entry has many characteristics linked to it, the row takes up more vertical space to show all the values. It means that fewer To Do entries are visible in the list. As part of this fix, you can opt in to setting this value to be collapsed by default. To enable the collapsing, go to Admin > General Options > Feature Configuration. Search for an existing feature configuration with the Feature Type 'Activity Queue Management'. If one does not exist, create a feature configuration of this type. Select the 'Collapse Characteristics Column' option and set the value to Y (Yes).

In addition, two fixes are included in this enhancement:
- The message filter often caused a horizontal scroll if the message text is too long. This is fixed.
- When the filter criteria match a very large number of records (tens of thousands of records or more), users may have received a timeout. In this release, we implemented a fetch limit of 5000 to forestall any timeouts. Using the To Do Dashboard you are able to see counts of records by certain criteria. If a Role or a To Do Type has a large number of records, users should put as much filter criteria as possible to be sure to get the data they are looking for.

Summary

Change Type	Y/N
Does this fix require any Admin (Soft) Table Changes to be made by the client?	N
Does this fix require upgrade data changes to be applied?	N
Does the fix involve DB Changes?	N
Is there an impact on any user interface or any other on-line behavior?	Y
Is there an impact on any batch process?	N
Is there an impact on CM – Custom Modification processing?	N

FW Changes

Changes were made to the zones for the To Do Management portal and the Details tab on the To Do Dashboard portal per the description.

Recommended Test Cases

For an environment with existing To Do Entries, confirm the following:
- A user can select a To Do Role and search for To Do entries for that role across To Do types.
- When selecting only a To Do Role, the Characteristic Type filters are built and a user can search for To Do entries that reference the Char Type / Char Value populated. All the characteristic types that are valid for the 'To Do Entry' characteristic entity are listed.
- When selecting a To Do Role, the To Do Type dropdown shows only the To Do Types that are valid for the role.
- Selecting a To Do Type no longer resets a value populated in the filter for the To Do Role. The To Do Role dropdown only shows the To Do Roles that are valid for the type.
- Selecting a To Do Type no longer resets the characteristic type filters - if the populated characteristic type is also valid for the seleted To Do Type
- When selecting a To Do Type that has valid To Do Entry characteristic types defined, only those characteristic types are shown in the dropdown (existing behavior)
- The message text filter continues to only be available when a To Do Type is found. However, longer text should no longer cause a horizontal scroll for the left column of filters.

For the characteristic column in the results, the previous behavior should be observed by default. All the characteristics are listed as name / value pairs.

Message	Characteristics
Usage Group not found	
Measurement not found for Measuring Component 700212439426 and Date/Time 06-01-2017 12:00AM PDT.	Account = 0196771868 Person = 9631334940 Premise = 5454451384 Service Agreement = 0191330411 Service Point = 5455815606 Contact = 227034384455 Device ID = 700829389544 Measuring Component = 700212439426 Service Point = 959402947492 Usage Subscription = 432105983608

Go to Feature Configuration and find the Activity Queue Management feature type. If one doesn't exist, create a feature with that feature type. Add the feature option 'Collapse Characteristics Column' with a value of 'Yes'. Now, when viewing To Do entries, only one line of the characteristics are shown along with an 'expand' icon. This allows for more rows to be displayed in the same vertical space.

Message	Characteristics
Usage Group not found	
Measurement not found for Measuring Component 700212439426 and Date/Time 06-01-2017 12:00AM PDT.	▶ Account = 0196771868 Person = ...

Click the expand icon to show the values:

▼ Account = 0196771868 Person = ...
Account = 0196771868
Person = 9631334940
Premise = 5454451384
Service Agreement = 0191330411
Service Point = 5455815606
Contact = 227034384455
Device ID = 700829389544
Measuring Component = 700212439426
Service Point = 959402947492
Usage Subscription = 432105983608

Note that even while the data is collapsed, if you search for a value and it is found in the collapsed section, the system finds the value and expands the content for you to show you the found result.
For example, if you know of a particular contact ID and you search for it:

227034384455 1/3

You are brought to that row with the content expanded.
