Reported Issue

Description

In baseline calculation, net metering must be performed even when the X-selection parameter is Temperature, provided the UOM Generated field is populated.

Steps To Recreate

N/A

Solution Design

Summary

Change Type	Y/N
Does this fix require any Admin (Soft) Table Changes to be made by the client?	N
Does this fix require upgrade data changes to be applied?	N
Does the fix involve DB Changes?	N
Is there an impact on any user interface or any other on-line behavior?	N
Is there an impact on any batch process?	N
Is there an impact on CM – Custom Modification processing?	N
Does this fix require an application viewer update for Algorithm data (run F1-AVALG)?	N
Does this fix require an application viewer update for MO data (run F1-AVMO)?	N
Does this fix require an application viewer update for Table data (run F1-AVTBL)?	N

Changes

- Script: D2_BaselineC (Updated)

Recommended Test Cases

Pre-Setup

- Enroll into a Program.
- Navigate to the Metered Service Point associated to the enrolled Program's Program Subscription.
- Install Device with Interval Measuring Components with different UOMs.
- Setup data on the Measuring Components for 2 months of data.
- A work calendar is setup listing the holidays for the year.
- Program events occur for few days in the 2 months period.
- For Temperature –
    - Create weather station that in turn creates weather meter.
    - On the weather meter, add device configuration and measuring component.
    - Setup data on the Measuring Component for 2 months of data.

Test Case 1: Verify that Baseline Calculation Rule calculates and uses the net consumption when UOM generated is populated and X selection parameter is Temperature.

Default Baseline Calculation Configuration-

Lookback	45
X of Y Type	High
X Selection Parameter	Temperature
Value of X	5
Value of Y	10
Interval Size	60 mins
Adjustment Type	Additive
Adjustment Window Start	-4
Adjustment Window End	-1
Adjustment Cap % (+/-)	20
Day Type	Weekdays

- Configure UOM, UOM Generated, UOM Temperature on the baseline calculation rule.

Case: When MCs related to Consumed UOM, UOM Generated, UOM Temperature have all the 2 months measurements.

- Based on the temperature measurements, qualified temperature and selected temperature measurements are populated. Based on Selected Temperature Measurements, Selected baseline measurements (that have the net consumption) are populated and are used for the baseline calculation.
- ‘Consumed – Generated’ is done to calculate the net consumption and is used in the baseline calculation.
- Verify that results are calculated correctly for the above combination.
