The information contained in this document is proprietary and confidential to Oracle and is subject to the non-disclosure obligations described in the license agreement between your company and Oracle. You may not provide this document or any copy of this document to third parties outside your company unless you first obtain the written permission of Oracle.

This document introduces new and changed business and technical features that Oracle has included in the"Single Fix" described in this document.

The functionality of the Single Fix described in this document may be superseded by functionality included in a future Single Fix, Release or Update. Oracle reserves the right to revise or expand the functionality of any future Single Fix, Release or Update of Framework in a manner compatible with Oracle's business objectives, and the business objectives of each of Oracle's customers, at the time that Oracle makes the software code generally commercially available.

Oracle will provide you with additional information concerning product Releases or Updates after Oracle finalizes the related specifications and tests the product component(s). Final documentation will be shipped to you with the media containing the Release or Update.

Please contact Oracle Customer Service Group if you have any questions or comments concerning this document, which has been prepared for your benefit as a licensee of Framework.

Description
Steps To Recreate

Description

The Generalized Initial Export (GDE) omits numeric columns from json export files. Omission occurs specifically when those columns have null values in the database. As a result, export file lack certain numeric fields if they are null.

Steps To Recreate

Ensure the data to be exported includes numeric columns with null values. For example, the D1_SP table has numeric columns D1_GEO_LAT and D1_GEO_LONG that can contain nulls.
Enable the initial export for the D1-SP maintenance object.
Submit the initial export batch job. Make sure "Do Not Apply Redaction Rules" set to Y.
Review the output JSON file once the batch job is successful.

Expected: Numeric columns with null values should appear in the JSON file.
Actual: Numeric columns with null values are missing from the JSON file.

Summary

Change Type	Y/N
Does this fix require any Admin (Soft) Table Changes to be made by the client?	N
Does this fix require upgrade data changes to be applied?	N
Does the fix involve DB Changes?	N
Is there an impact on any user interface or any other on-line behavior?	N
Is there an impact on any batch process?	N
Is there an impact on CM – Custom Modification processing?	N

The following questions are only applicable to products built on Oracle Utilities Application Framework version 22A / 4.5.0.0.0 or earlier.

Change Type	Y/N
Does this fix require an application viewer update for Algorithm data (run F1-AVALG)?	N
Does this fix require an application viewer update for MO data (run F1-AVMO)?	N
Does this fix require an application viewer update for Table data (run F1-AVTBL)?	N

FW Changes

Changes have been made to capture null values for numeric columns and include them in the output file.

Recommended Test Cases

Same as 'Steps to reproduce'.
