Reported Issue

Description

Daily SQ is not multiplied to the item count in CCS. In the customer's scenario, the device type service quantity is 2.334247 KWH and the multi-item count on the SP is 4. When the usage transaction is created, the dailyServiceQuantity value is calculated as 2.334247 in the usage period. The expected value to be calculated is (2.334247 * 4) which is 9.336988 KWH.

Steps to Recreate

1. Create device type of Item Type and enter the device type service quantity as 2.334247 KWH with effective date/time 2010-01-01-00.00.00.
2. Create a service point of Multi-item type. On the SP Multi-Item Information zone, add multi-item with Item Count as 4.
3. Create a Usage Calculation Group and add "Get Item Counts and Consumption" usage rule in it.
4. Create a Usage Subscription and add the above Usage Group.
5. Add the above Service point on the US.
6. Create Usage Transaction and observe that the Daily SQ is not multiplied with the item count. The dailyServiceQuantity value is calculated as 2.334247.

```
1 select * from D1_USAGE_PERIOD_ITEM_DET where d1_usage_id='84260580216966';
```

Query Result

SQL | All Rows Fetched: 1 in 1.064 seconds

	QUANTITY	D1_UOM_CD	D1_SP_ID	USG_GRP_CD	USG_RULE_CD	BO_DATA_AREA	VERSION	OVRD_QTY_FLG
1	77.402776	KWH	517942240307	ZZ_SD_GICC	ZZ_SD_GETITEM	<dailyServiceQuantity>2.334247</dailyServiceQuantity>	5	(null)

Java Changes:

CalculateItemConsumptionService.java

Recommended Test Cases

Test Case-1: Verify that the Daily SQ is multiplied with the item count in the Usage Period Item Details on the Usage Transaction when the usage rule "Get Item Counts and Consumption" is configured.

1. Create device type of Item Type and enter the device type service quantity as 2.334247 KWH with effective date/time 2010-01-01-00.00.00.
2. Create a service point of Multi-item type. On the SP Multi-Item Information zone, add multi-item with Item Count as 4.
3. Create a Usage Calculation Group and add “Get Item Counts and Consumption” usage rule in it.
4. Create a Usage Subscription and add the above Usage Group.
5. Add the above Service point on the US.

Copyright ©2026, Oracle. All rights reserved.

6. Create Usage Transaction and verify that the Daily SQ is multiplied with the item count. The dailyServiceQuantity value is correctly calculated as (2.334247 * 4) which is 9.336988 KWH.

Test Case-2 <Regression Case>: Verify that the item count is displayed in decimals in the Usage Period Item Details on the Usage Transaction when the usage rule "Get Item Counts and Consumption" is configured.

1. Create a service point of Multi-item type.
2. On the SP Multi-Item Information zone, add multi-items with Item Count in decimals.
3. Create a Usage Calculation Group and add “Get Item Counts and Consumption” usage rule in it.
4. Create a Usage Subscription and add the above Usage group.
5. Add the above Service point on the US.
6. Create Usage Transaction and Verify that the the item count is displayed in decimals in Usage Period Item Details.
