Reported Issue

Description

In some cases, submitting an adjustment that requires approval results in the creation of two To Dos associated with the same adjustment record. The issue occurs intermittently when the Submit for Approval button is clicked on the Adjustment page.

Steps To Recreate

Data Setup

Adjustment Type with Approval Profile

Approval Profile with Limits

Adjustment Profile

Copyright ©2026, Oracle. All rights reserved.

SA Type with Adjustment Profile

Replication Steps

- Create an active service agreement with the Data Setup and add an adjustment to the service agreement. The adjustment type should have the same setup as in the Data Setup.
- On the Adjustment Page, click the Submit for Approval button.

Copyright ©2026, Oracle. All rights reserved.

Batch was executed

Expected Result: One To Do will be created.

Actual Result: More than one To Do will be created.

Note: We were not able to replicate the issue in the development environment.

Solution Design

- A new Business Service **Update Adjustment for Approval**(***C1-UpdateAdjustment***) will be created using a new java-based Service Program **Update Adjustment for Approval** (***C1UPDADJAPPR***). The java-based Service Program will trigger an update to the adjustment, so any further updates to it won't be allowed until the transaction is completed. The Business Service will be called first within the Script **Adjustment Approval Profile - Determine Approval Requirements** (***C1-AdjAPReqt***) before the rest of the script is executed, as this script determines approval requirements and creates approval requests.

Summary

Change Type	Y/N
Does this fix require any Admin (Soft) Table Changes to be made by the client?	N
Does this fix require upgrade data changes to be applied?	N
Does the fix involve DB Changes?	N
Is there an impact on any user interface or any other on-line behavior?	**Y**
Is there an impact on any batch process?	N
Is there an impact on CM – Custom Modification processing?	N
Does this fix require an application viewer update for Algorithm data (run F1-AVALG)?	N
Does this fix require an application viewer update for MO data (run F1-AVMO)?	N
Does this fix require an application viewer update for Table data (run F1-AVTBL)?	N

Other Changes

Service Program

Update Adjustment for Approval (C1UPDADJAPPR) (New)

Property	Value
Service Name	C1UPDADJAPPR
Description	Update Adjustment for Approval
Application Service	Default Application Service
Service Type	Java Based Service

Business Service

Update Adjustment for Approval (C1-UpdateAdjustment) (New)

Property	Value
Business Service	C1-UpdateAdjustment (New)
Description	Update Adjustment for Approval
Service Name	Update Adjustment for Approval
Application Service	Default Application Service

Schema

Schema

`<schema pageAction="change">`
`  <adjustmentId required="true" mapField="ADJ_ID" dataType="string"/>`
`</schema>`

Script

Adjustment Approval Profile - Determine Approval Requirements (C1-AdjAPReqt) (Existing)

Business Rules

- Before creating an approval request for the adjustment
  - Call the new business service ***C1-UpdateAdjustment*** so the adjustment is locked for update no additional approvals with To Dos are created.

Java Changes

UpdateAdjustmentForApprovalService (New)

Method: Change (New)

- If logging is on, log the start of change.
- Check if the item is an existing adjustment.
  - If it is an existing adjustment, update it with no visible changes, such as setting the version to the same value.
  - Make sure no additional reads will be triggered from this change.
- If logging is on, log the end of change.

Method: Should Log (New)

- Return the value of whether logging is on or off.

Data Clean-Up / Fixes

Not applicable

Recommended Test Cases

Test Case 1: Reported Issue

- Refer to Replication Steps. Verify that the To Do entry is created, and there is only one To Do entry.
- **Expected Output:** The adjustment will have an approval record and only one To Do.

Test Case 2: Regression – Create an Adjustment without a need for a To Do

- Refer to Replication Steps but instead triggering the requirement for approval with no To Dos, by applying a very small adjustment only.
- **Expected Output:** The adjustment will have an approval record and no To Dos.
