Recommended Test Cases 6
- Test Case 1: Verify that when a meter exchange occurs from an interval device to a scalar device, two Sub Usage Transactions are created and both are in Calculated status. 6
- Test Case 2: Verify that when a Usage Transaction is created for a period in which the Scalar Measuring Component has no reading at the end date/time, the system generates an estimated measurement for the missing period. 7

Reported Issues

Description

In the scenario where implementation has an override Usage Calculation Group for Scalar Device Configuration Types. Due to this, sub UTs are being created if there is a meter exchange between an Interval Meter to a Scalar Device. On the new scalar device, there is an actual install reading, but no reading at the end of the bill period (in which case, the system is expected to estimate), instead an error - The element “The element /D2-SubUsageTransaction/scalar has no such node named estimate Time of type field.” is encountered.

Steps to Recreate

1. Create a Device, Device Configuration and Interval Measuring component.
2. Create a Service Point and install the device on it.
3. Create readings on the interval measuring component from 01-01-2025 12:00AM to 07-01-2025 12:00 AM
4. Create another Device, Device Configuration and Scalar Measuring Component.
5. Remove the device with interval MC on 07-01-2025 12:AM

 Copyright ©2026, Oracle. All rights reserved.

6. Install the device with Scalar MC on the Service Point on 07-01-2025.
7. Add initial reading on 07-01-2025 12:00 AM.
8. Create Usage Calculation Group and create a Get Interval usage rule on it.
9. Create another Usage Calculation Group and create a Get Scalar usage rule on it.
10. Create Rate with Interval Calculation Group as default and Scalar Calculation Group as an override.
11. Create a Usage Subscription with Rate, effective from 01-01-2025 on it.
12. Create a Usage Transaction from 06-15-2025 12:00AM to 07-15-2025 12:00 AM.
13. Observe that Usage Transaction with two Sub Usage Transactions gets created one for interval readings and the other for scalar readings.
14. Notice that the Sub Usage Transaction for interval reads is in Calculated status, whereas the Sub Usage Transaction for Scalar reads is in Issue detected status.

Solution Design

In GetScalarAlgComp_Impl, add logic to check if the Usage Transaction BO data has Parent Usage Id field, if there is Parent Usage Id field (Sub Usage Transaction has parent Usage Id.) then skip retrieving estimate time from the Usage Transaction BO.

Summary

Change Type	Y/N
Does this fix require any Admin (Soft) Table Changes to be made by the client?	N
Does this fix require upgrade data changes to be applied?	N
Does the fix involve DB Changes?	N
Is there an impact on any user interface or any other on-line behavior?	N
Is there an impact on any batch process?	N
Is there an impact on CM – Custom Modification processing?	N
Does this fix require an application viewer update for Algorithm data (run F1-AVALG)?	N
Does this fix require an application viewer update for MO data (run F1-AVMO)?	N
Does this fix require an application viewer update for Table data (run F1-AVTBL)?	N

Changes

- GetScalarAlgComp_Impl.java

Recommended Test Cases

Test Case 1: Verify that when a meter exchange occurs from an interval device to a scalar device, two Sub Usage Transactions are created and both are in Calculated status.

1. Create a Device, Device Configuration and Interval Measuring component.

Copyright ©2026, Oracle. All rights reserved.

2. Create a Service Point and install the device on it.
3. Create readings on the interval measuring component from 01-01-2025 12:00AM to 07-01-2025 12:00 AM
4. Create another Device, Device Configuration and Scalar Measuring Component.
5. Remove the device with interval MC on 07-01-2025 12:00 AM
6. Install the device with Scalar MC on the Service Point on 07-01-2025.
7. Add initial reading on 07-01-2025 12:00 AM.
8. Create Usage Calculation Group and create a Get Interval usage rule on it.
9. Create another Usage Calculation Group and create a Get Scalar usage rule on it.
10. Create Rate with Interval Calculation Group as default and Scalar Calculation Group as an override.
11. Create a Usage Subscription with Rate, effective from 01-01-2025 on it.
12. Create a Usage Transaction from 06-15-2025 12:00AM to 07-15-2025 12:00 AM, with estimate date as 07-15-2025.
13. Verify that Usage Transaction with two Sub Usage Transactions gets created one for interval readings and the other for scalar readings.
14. Verify that both Sub Usage Transactions are in calculated Status.
15. Verify that an estimated IMD is created on the Scalar measuring component.

    from 07-01-2025 12:00 AM to 07-15-2025 12:00 AM.

Test Case 2: Verify that when a Usage Transaction is created for a period in which the Scalar Measuring Component has no reading at the end date/time, the system generates an estimated measurement for the missing period.

1. Create a Device, Device Configuration and Scalar Measuring component.
2. Create a Service Point and install the device on it
3. Add initial reading on 07-01-2025 12:00 AM.
4. Create Usage Calculation Group and create a Get Scalar usage rule on it.
5. Create another Usage Calculation Group and create a Get Scalar usage rule on it.
6. Create a Usage Subscription.
7. Create a Usage Transaction from 07-01-2025 12:00AM to 07-15-2025 12:00 AM, with estimate date as 07-15-2025.
8. Verify that an estimated IMD is created for the period from 07-01-2025 12:00AM to 07-15-2025 12:00 AM.
9. Verify that the Usage Transaction is in approval in progress status.
