The information contained in this document is proprietary and confidential to Oracle and is subject to the non-disclosure obligations described in the license agreement between your company and Oracle. You may not provide this document or any copy of this document to third parties outside your company unless you first obtain the written permission of Oracle.

This document introduces new and changed business and technical features that Oracle has included in the ”Single Fix” described in this document.

The functionality of the Single Fix described in this document may be superseded by functionality included in a future Single Fix, Release or Update. Oracle reserves the right to revise or expand the functionality of any future Single Fix, Release or Update of CSF in a manner compatible with Oracle’s business objectives, and the business objectives of each of Oracle’s customers, at the time that Oracle makes the software code generally commercially available.

Oracle will provide you with additional information concerning product Releases or Updates after Oracle finalizes the related specifications and tests the product component(s). Final documentation will be shipped to you with the media containing the Release or Update.

Please contact Oracle Customer Service Group if you have any questions or comments concerning this document, which has been prepared for your benefit as a licensee of CSF.

Reported Issue

Description

The issue with Factory Reset (Package CSF_DATA_CLEANUP) going into restart loop and timing out was reported by multiple customers.

Steps To Recreate

1. On SQL Developer, execute the following:
    a. Run CSF_DATA_CLEANUP Store Procedure

Actual Result:

CSF_DATA_CLEANUP runs slowly and causes timeouts.

Expected Result:

CSF_DATA_CLEANUP completes successfully without errors.

Solution Design

Summary

Change Type	Y/N
Does this fix require any Admin (Soft) Table Changes to be made by the client?	N
Does this fix require upgrade data changes to be applied?	N
Does the fix involve DB Changes?	Y
Is there an impact on any user interface or any other on-line behavior?	N

Copyright ©2026, Oracle. All rights reserved.

Is there an impact on any batch process?	N
Is there an impact on CM – Custom Modification processing?	N
Does this fix require an application viewer update for Algorithm data (run F1-AVALG)?	N
Does this fix require an application viewer update for MO data (run F1-AVMO)?	N
Does this fix require an application viewer update for Table data (run F1-AVTBL)?	N

Data Clean-Up / Fixes

SQL: CSF_DATA_CLEANUP.sql

Remove the logic determining whether the table is partitioned.

Cleanup_CISADM (Change)

Remove the conditional fork and always perform Truncate_Non_Partitioned_Table

Cleanup_STGADM (Change)

Remove the conditional fork and always perform Truncate_Non_Partitioned_Table

Truncate_Partitioned_Table (Remove)

Remove this procedure, as it is no longer used in the PL/SQL.

Recommended Test Cases

Test Case 1: Execute Cleanup_Data_In_Schema procedure for CISADM.

1. Given an environment ready to test reset to factory.
2. On SQL Developer execute the following:
    a. Execute *CSF_DATA_CLEANUP.Cleanup_Data_In_Schema* store procedure for ‘CISADM’.

Copyright ©2026, Oracle. All rights reserved.

Note to QA: In case the truncation of the tables is not desired to execute, comment out execution of Truncate_Non_Partitioned_Table and change it to DBMS output that prints the table name so affected table will not be truncated out.

Expected result: All tables in CISADM truncated in *Truncate_Non_Partitioned_Table* procedure.

Test Case 2: Execute Cleanup_Data_In_Schema procedure for STGADM.

1. Given an environment ready to test reset to factory.
2. On SQL Developer execute the following:
    a. Execute *CSF_DATA_CLEANUP.Cleanup_Data_In_Schema* store procedure for ‘STGADM.

Note to QA: In case the truncation of the tables is not desired to execute, comment out execution of Truncate_Non_Partitioned_Table and change it to DBMS output that prints the table name so affected table will not be truncated out.

Expected result: All tables in STGADM truncated in *Truncate_Non_Partitioned_Table* procedure.
